

Restricted Keying Systems

LSGF

The LS series is a mechanical restricted keying system offering design registration protection until September 2019 in both Australia and New Zealand.

DC1

DC-1 is a mechanical restricted keying system with a patented Bump-resistant feature. DC-1 is protected by design registration in both Australia and New Zealand until November 2020.

BINARY PLUS
RESTRICTED KEYWAY

Binary Plus (BP) is a unique Australian designed and manufactured restricted keying system which provides an extra level of security via a number of very special features including side traps, special top pins & an extra thick key. A number of the BP Profiles retain design registration protection until May 2018.

The **MLA** Advantage

Get the right security advice from a
Master Locksmiths Association Member

Master Locksmiths Association of Australasia Limited

Why Choose an MLA Member?

Master Locksmith Association (MLA) members are highly trained, fully qualified security equipment professionals. All members are police checked and are required to adhere to a strict Code of Ethics and Code of Conduct.

MLA members have access to the very latest in restricted keying systems, from mechanical keys and locks up to the world-leading electronic master keying systems. Many are protected by patents and design registration. Combined with the MLA's Code of Ethics, consumers are guaranteed protection and peace of mind.

Regardless of the currency of patents and design registrations MLA members may only cut or copy keys belonging to restricted systems for which they hold the master records, and only then with the clients' written authorisation.

Find your nearest member by accessing the "Find a Locksmith" feature on the MLA website at www.masterlocksmiths.com.au

Products & Services

MLA locksmiths provide security solutions for residential, commercial and automotive applications via a wide range of products and services. MLA members can also provide expert service and advice on safes and vaults, access control, alarms, CCTV and electronic security.

- Safe sales, repairs & safe reconditioning
- Replacement automotive keys
- Residential, commercial & automotive openings
- Residential & commercial security surveys
- Alarms
- CCTV
- Access control systems
- Security maintenance agreements

Master Locksmith Access Key - Mlak

The Mlak is an innovative system that allows 24 hours a day access to public facilities e.g. toilets for people with a disability. Accessible facilities should be open during the day, however sometimes it is necessary to lock them after hours.

Mlak is designed to increase access to facilities that would under normal circumstances be locked after hours.

LOKtouch™

LOKtouch™ is the very latest in restricted master keying systems.

LOKtouch™ is the very latest in restricted master keying systems. The system uses wireless, stand-alone cylinders, powered by electronic keys providing an economical alternative to traditional mechanical cylinders & keys, or expensive fully-wired electronic systems.

LOKtouch electronic cylinders are retro-fitted to replace mechanical lock cylinders in existing doors, cabinets, drawers and padlocks.

Combined with user friendly software, LOKtouch™ has the option of allowing the end user to assign their own access permissions and manage their own sites.

LOKtouch™ is a licensed product of the MLA, and is only supplied throughout Australia and New Zealand by members of the Master Locksmiths Association.

LOKtouch™ - the future in master keying!
